The Goal

Students will design, implement, evaluate, and critically analyse a **recommender system** for a real or realistic **application scenario**.

The group project emphasises system design, user needs, business opportunity, ethical implications, and communication of results.

Each group will choose a recommendation domain, define a target user scenario, define an appropriate dataset, build a recommender-system pipeline, think about evaluation, and present the results in a final report and oral presentation.

The Goal

It is not about implementing but about **analysing the business application** and **opportunity**. An MVP design or prototype will be considered the extra mile (optional).

Imagine you are presenting your idea to an investor to build a company, or to a company that could integrate your idea.

The Goal: objectives

- Identify a **business opportunity** where recommendation can create measurable value.
- Define **target users, stakeholders, and business objectives**.
- Translate a business goal into a **recommendation task**.
- Define technical, user-centered, and business **evaluation metrics**.
- Analyze trade-offs between business value, user satisfaction, fairness, privacy, and long-term trust.
- **Present a recommender-system proposal** in a way that is convincing for both technical and business audiences.

1. The Goal

2. Your Topic

4. Presentation

5. Assessment

Your Topic: your own idea!

- What **organisation or service** is the recommender designed for?
- What **business problem** does it address?
- Why is **recommendation useful** in this context?
- Who are the **target users**?
- Who are the other **stakeholders**, such as sellers, artists, instructors, advertisers, or content providers?

1. The Goal

2. Your Topic

4. Presentation

5. Assessment

Presentation

Suggested items to cover (be creative, craft your own presentation!)

- Executive summary
- Business context and opportunity
- Target users and stakeholders
- Recommendation use case
- Dataset and data strategy
- Recommender methods
- Evaluation methodology
- Technical considerations
- Business impact analysis
- Ethical, legal, and social risks
- Limitations and future work

1. The Goal

2. Your Topic

4. Presentation

5. Assessment

Assessment

- Business Problem and Value Proposition — 30%
- Technical Considerations — 20%
- Evaluation and Business Impact — 30%
- Communication and Professionalism — 20%
